

Links to Delpro

2015-12-17

You might need to get the latest version of IFCParlour.dll from December 2015 loaded in to C:\IFCW\Components folder.

We need a folder called C:\Delpro\ISODC305 on the C:\ drive

Make sure there is a file called ISO32.exe of size 1,431kb located in folder C:\Delpro\ISODC305. If this file is not there, scan the hard disk to see where it is located, and if found, copy to C:\Delpro\ISODC305. If not found we need to talk to Alfa Laval tech support. (There could be an ISO32.exe of a different (smaller ~102kb) size on the PC, this one is not suitable, the size is important)

In the Delpro software itself check that "Use Command Line ISO" is ticked

In the Delpro software itself check that "Location of the ISO Files" is set to C:\Delpro\ISODC305

In Herdmaster "Parlour link" section, click the link at the bottom and pick "Delpro V4.5", the bottom one in the list. In the 2nd box pick C:\Delpro\ISODC305\ISO32.exe

The Delpro link should now work.

Files used by Herdmaster

When Herdmaster is exchanging data with Delpro, we use these files...

DP_Yin.dat	Yield in file (command from Herdmaster to request yields)
DP_Yout.dat	Yield out file (contains parlour yields for use in Herdmaster)
DP_Ein.dat	Event in file (contains events being exported to Delpro)
DP_Eout.dat	Event out file (Delpro feedback on use of Herdmaster events)
DP_Log.dat	Log file that will contain error messages reported by Delpro

All the above files will be located in C:\Delpro\ISODC305. We should only ever need to look at them if something is going wrong and data is not transferring correctly.

Shane 087-3495849

The file DP_Eout.dat is now in c:\delpro\isodc305 folder (on last farm I looked at)
